Hot level measurement in ladles

FEAL
Industrial Solutions

Short description:

For an automatically level measurement in hot metal ladles, laser-distance sensors are installed over this ladles. The sensors can be measured on hot surface to max. 1600 ° C. For cooling, the sensor is installed in a a special air and water cooled housing.

Allgemeine Merkmale:

- Automatic operation
- High Availability
- Contactless measurement
- Wear measurement in harsh environments
- High operational safety and reliability
